Preface	xiii
1 Groundwater: the Big Picture	1
1.1 Introduction	1
1.2 Global Water Reservoirs and Fluxes	4
1.3 Terminology for Subsurface Waters	6
1.4 Fluxes Affecting Groundwater	7
1.4.1 Infiltration and Recharge	7
1.4.2 Evapotranspiration	8
1.4.3 Groundwater Discharge to Surface Water Bodies	10
1.4.4 Pumping	12
1.5 Hydrologic Balance	13
1.6 Water and Groundwater Use	15
1.7 What Groundwater Scientists Do	16
1.8 Problems	17
2 Physical Properties	21
2.1 Introduction	21
2.2 Properties of Water	21
2.2.1 Density and Compressibility	21
2.2.2 Viscosity	23
2.2.3 Surface Tension and Capillarity	24
2.3 Properties of Air	25
2.4 Properties of Porous Media	25
2.4.1 Porosity	25
2.4.2 Grain Size	27
2.4.3 Volumetric Water Content and Bulk Density	28
2.5 Energy and Hydraulic Head	30
2.5.1 Hydrostatics	32
2.6 Measuring Hydraulic Head with Wells and Piezometers	33
2.7 Problems	36

3	Principles of Flow	39
3.1	Introduction	39
3.2	Darcy's Law and Hydraulic Conductivity	39
3.2.1	Specific Discharge and Average Linear Velocity	42
3.2.2	Darcy's Law in Three Dimensions	43
3.3	Intrinsic Permeability and Conductivity of Other Fluids	45
3.4	Limits on the Application of Darcy's Law	46
3.4.1	The Continuum Assumption	46
3.4.2	Laminar and Turbulent Flow	47
3.5	Heterogeneity and Anisotropy of Hydraulic Conductivity	48
3.6	Estimating Average Hydraulic Conductivities	52
3.7	Transmissivity	55
3.8	Measuring Hydraulic Conductivity	55
3.8.1	Correlations of Grain Size to Hydraulic Conductivity	56
3.8.2	Laboratory Hydraulic Conductivity Tests	57
3.8.3	Slug Tests	59
3.8.4	Pumping Tests	62
3.8.5	Tracer Tests	62
3.8.6	Modeling Natural Systems	63
3.9	Flow in Fractured Rock	64
3.10	Unsaturated Flow	65
3.10.1	Water Content and Pressure	65
3.10.2	Measuring Pressures below Atmospheric	68
3.10.3	Water Content, Hydraulic Conductivity, and Darcy's Law	69
3.11	Flow of Groundwater with Variable Density	70
3.11.1	Fresh-Salt Water Interfaces in Coastal Aquifers	72
3.12	Problems	75
4	Geology and Groundwater Flow	81
4.1	Introduction	81
4.2	Exploring the Subsurface	81
4.2.1	Excavation	82
4.2.2	Direct-Push Probes	82
4.2.3	Drilling	84
4.2.4	Well Construction	87
4.2.5	Resistivity, Electromagnetic, and Radar Surveys	88
4.2.6	Seismic Refraction Surveys	91
4.2.7	Borehole Logging	92
4.3	General Patterns of Groundwater Flow	93
4.3.1	Aquifers and Confining Layers	93
4.3.2	Recharge and Discharge	94
4.3.3	Water Table and Potentiometric Surface Maps	97
4.3.4	Interaction of Groundwater and Surface Water	98
4.3.5	Crustal-Scale Pore Fluid Flow	98
4.4	Groundwater in Unconsolidated Deposits	101

4.4.1	The High Plains Aquifer	104
4.4.2	New Jersey Coastal Plain	107
4.4.3	Western Cape Cod Glacial Deposits	109
4.5	Groundwater in Sedimentary Rocks	112
4.5.1	The Dakota Sandstone Aquifer	113
4.5.2	Karst at Mammoth Cave, Kentucky	116
4.6	Groundwater in Igneous and Metamorphic Rocks	117
4.6.1	Columbia Plateau Basalts, Northwest U.S.	120
4.7	Frozen Ground and Permafrost	121
4.8	Problems	123
5	Deformation, Storage, and General Flow Equations	125
5.1	Introduction	125
5.2	Effective Stress	125
5.3	Atmospheric Pressure Fluctuations	127
5.4	Excavation Instability and Liquefaction	130
5.5	Slope Instability	131
5.5.1	Vaiont Reservoir Slide	132
5.6	Earthquakes and Groundwater Pressures	133
5.7	Matrix Compression	136
5.7.1	Subsidence in the San Joaquin Valley	139
5.7.2	Consolidation: Time-Dependent Compression	143
5.7.3	Pore Water Pressures in Sedimentary Basins	146
5.8	Changes in Subsurface Water Storage	147
5.8.1	Elastic Storage	147
5.8.2	Water Table Storage	149
5.9	General Flow Equations	152
5.9.1	Three-Dimensional Saturated Flow	153
5.9.2	Two-Dimensional Saturated Flow in Aquifers	156
5.9.3	Three-Dimensional Unsaturated Flow	160
5.10	Overview of Mathematical Modeling	160
5.11	Problems	163
6	Modeling Steady Flow with Basic Methods	167
6.1	Introduction	167
6.2	Aquifers with Uniform Transmissivity	167
6.2.1	Solution for Uniform Flow	167
6.2.2	Solution for Radial Flow to a Well	169
6.2.3	Solution for Uniform Recharge/Leakage	172
6.2.4	Estimating the Recharge/Transmissivity Ratio	175
6.2.5	Superposition	176
6.2.6	Capture Zone of a Well in Uniform Flow	177
6.2.7	Wells Near Straight Constant Head Boundaries	180
6.2.8	Wells Near Straight Impermeable Boundaries	184
6.2.9	Wells Near Circular Constant Head Boundaries	187
6.2.10	Analyzing the Long-Term Drawdown of Wells	190

6.3	Vertical Plane Flow	191
6.4	Flow Net Graphical Solutions	193
6.4.1	Boundary Conditions	194
6.4.2	Discharges	195
6.4.3	How to Draw Flow Nets	196
6.4.4	Anisotropic Systems	197
6.4.5	Deciding Whether to Use a One-, Two-, or Three-Dimensional Model	201
6.5	Unconfined Aquifers with a Horizontal Base	202
6.5.1	Solutions for Uniform Flow, Radial Flow, and Uniform Recharge	203
6.5.2	Superposition and Imaging	205
6.6	Problems	208
7	Modeling Transient Flow with Basic Methods	215
7.1	Introduction	215
7.2	Radial Flow in Aquifers with Uniform Transmissivity	215
7.2.1	The Theis Nonleaky Aquifer Solution	215
7.2.2	The Hantush–Jacob Solution for a Leaky Aquifer	220
7.2.3	The Neuman Solution for an Unconfined Aquifer	221
7.3	Pumping Test Analysis	224
7.3.1	Log–Log Curve Matching	224
7.3.2	Semi–Log Drawdown vs. Time	227
7.3.3	Pseudo-Steady Drawdown vs. Distance	229
7.3.4	Constant-Drawdown Variable Discharge Test	229
7.4	Additional Considerations for Pumping Tests	231
7.4.1	Superposition in Space — Multiple Wells and Aquifer Boundaries	231
7.4.2	Superposition in Time — Variable Pumping Rates at a Well	233
7.4.3	Partial Penetration and Hydraulics Near the Pumping Well	235
7.5	Problems	237
8	Computer-Assisted Flow Modeling	241
8.1	Introduction	241
8.2	Finite Difference Method	241
8.2.1	Finite Difference Equations	243
8.2.2	Boundary Conditions	248
8.2.3	Example Application	250
8.3	Finite Element Method	252
8.3.1	Finite Element Equations	255
8.3.2	Boundary Conditions	258
8.4	Analytic Element Method	258
8.4.1	Equations for Two-Dimensional Aquifer Flow	259
8.4.2	Common Elements	263

8.4.3	Example Application	268
8.5	Strengths and Limitations of These Methods	270
8.6	Model Calibration and Parameter Estimation	272
8.7	Interpreting Model Results	273
8.8	Problems	274
9	Groundwater Chemistry	279
9.1	Introduction	279
9.2	Molecular Properties of Water	280
9.3	Solute Concentration Units	281
9.4	Natural Solutes	283
9.4.1	Inorganic Solutes	283
9.4.2	Electroneutrality	286
9.4.3	Presenting Inorganic Data Graphically	286
9.4.4	Organic Solutes	288
9.5	Chemical Reactions	290
9.5.1	Equilibrium	291
9.5.2	Activity and Effective Concentration	293
9.5.3	Reaction Rates and Deviation from Equilibrium	295
9.6	Mineral Dissolution and Precipitation	297
9.7	Gas–Water Partitioning	299
9.8	Aqueous-Phase Reactions	301
9.8.1	pH, Acids, and Bases	301
9.8.2	Carbonate Reactions and Alkalinity	303
9.8.3	Metal Complexes	305
9.8.4	Oxidation and Reduction	307
9.8.5	Biogeochemical Redox Reactions	311
9.9	Sorption	313
9.9.1	Surface Complexation of Ions	313
9.9.2	Nonpolar Organic Compounds	318
9.10	Isotopes	321
9.10.1	Stable Isotopes and Water Origins	321
9.10.2	Radioisotopes and Age Dating	324
9.10.3	Groundwater Records of Paleoclimate	327
9.11	Examples of Natural Groundwater Chemistry Processes	328
9.11.1	Floridan Aquifer: Regional Scale	328
9.11.2	Floridan Aquifer: Local Scale	331
9.11.3	Milk River Aquifer	333
9.12	Problems	335
10	Groundwater Contamination	339
10.1	Introduction	339
10.2	Contamination Sources	339
10.2.1	Leaking Storage Tanks	340
10.2.2	Septic Systems	340
10.2.3	Landfills	341

10.2.4	Others	342
10.3	Organic Contaminants	343
10.3.1	Overview of Migration Patterns	343
10.3.2	Structure and Occurrence of Common Contaminants	345
10.3.3	Properties of Common Contaminants	349
10.4	Nonaqueous-Phase Liquids	352
10.4.1	Saturation, and Wetting and Nonwetting Fluids	352
10.4.2	Interfacial Tension and Capillary Pressure	353
10.4.3	Capillary Pressure vs. Saturation and Residual Saturation	357
10.4.4	Relative Permeability and Flow of Multiple Phases	359
10.5	Solute Transport Processes	360
10.5.1	Advection and Mechanical Dispersion	360
10.5.2	Molecular Diffusion	362
10.5.3	Sorption	365
10.5.4	Colloid Transport	366
10.6	Case Studies of Solute Transport	368
10.6.1	CFB Borden, Ontario Tracer Test	368
10.6.2	North Carolina Gasoline and Diesel Spill	372
10.7	Modeling Solute Transport	375
10.7.1	Modeling Dispersion and Diffusion	375
10.7.2	General Equations for Nonreactive Solutes	377
10.7.3	General Equations for Reactive Solutes	379
10.7.4	Boundary Conditions	380
10.7.5	One-Dimensional Solution for a Step Inlet Source	381
10.7.6	Solution for a Pulse Point Source	383
10.7.7	Other More Complex Solutions	384
10.8	Investigating Contamination	385
10.8.1	Sampling Groundwater	385
10.8.2	Sampling Pore Gases	388
10.8.3	Electromagnetic Surveys	388
10.8.4	Investigating NAPLs	389
10.9	Remediating Contamination	390
10.9.1	Source Removal or Isolation	390
10.9.2	NAPL Recovery	392
10.9.3	Hydraulic Control of Solute Plumes	393
10.9.4	Soil Vapor Extraction	394
10.9.5	Bioremediation	397
10.9.6	Engineered In Situ Reaction Zones	399
10.10	Problems	400
	Appendix A Units and Conversions	405
A.1	Length [L]	405
A.2	Area [L^2]	405
A.3	Volume [L^3]	405
A.4	Time [T]	405

A.5	Mass [M] and Weight [ML/T ²] at Earth's Surface	405
A.6	Force [ML/T ²]	406
A.7	Pressure or Stress [M/LT ²]	406
A.8	Energy [ML ² /T ²]	406
A.9	Power [ML ² /T ³]	406
A.10	Angle	406
A.11	Temperature	406
A.12	Velocity and Hydraulic Conductivity [L/T]	406
A.13	Transmissivity [L ² /T]	406
A.14	Discharge (Flow Rate) [L ³ /T]	407
A.15	Unit Prefixes	407
A.16	Performing Unit Conversions	407
Appendix B Mathematics Primer		409
B.1	Algebra and Geometry	409
B.2	Functions of One Variable	410
B.3	Formulas for Common Derivatives	410
B.4	Functions of Two or More Variables	411
Appendix C Book Internet Site		413
Answers to Selected Problems		415
References		419
Index		435
Periodic Table of the Elements printed on the endpapers
